

TASK 3

- ⇒ Accuracy is only around 50% and to improve the accuracy we are still in need of more data.
- ⇒ The price of the product is the most important feature, at the same time category is not Important.
- ⇒ It is helpful when more features related to the product are provided.
- ⇒ The hour of the day was also important for predicting stock.
- ⇒ While build on IoT, the temperature was also the most significant with the model, with more IoT data across a larger time period, we believe the accuracy will increase.
- ⇒ It is more helpful when we use weather data.
